PROFILE

Computer Engineering student with a strong foundation in AWS and Linux, along with hands-on practice in cloud and system administration concepts. Passionate about cloud computing and DevOps, and continuously learning through practical tasks and projects. Strong problem-solving mindset with the ability to learn and adapt quickly. Seeking an opportunity to apply my knowledge and gain real-world experience.

EDUCATION

Bachelor of Engineering (Computer Engineering), <i>G.S. Moze College of Engineering, Pune</i> CGPA: 8.95	2022 – 2026
Class 12th, S.S.M.M. Jr. College, Pachora, Dist. Jalgaon Percentage: 75%	2021 – 2022
Class 10th, Late P. K. Shinde Madhyamik Vidyalaya, Pachora, Dist. Jalgaon Percentage: 86%	2019 – 2020

SKILLS

AWS

- **Compute:** EC2, Auto Scaling
- **Networking :** VPC, Elastic Load Balancer, Route 53
- **Storage:** S3
- **Database:** RDS
- **Security & Access:** IAM
- **Monitoring:** CloudWatch

Networking

TCP/IP, CIDR, Routing, Security Groups

Scripting

Bash Scripting

OS

Linux (Ubuntu), Amazon Linux, Windows.

PROJECTS

Highly Available Multi-AZ Web Application Deployment on AWS

- Designed a highly available architecture using VPC across two Availability Zones with public and private subnets.
- Deployed web servers on private EC2 instances with Auto Scaling for scalability and fault tolerance.
- Implemented an Application Load Balancer to distribute traffic across multiple Availability Zones.
- Configured an Internet Gateway and NAT Gateways to enable secure internet access for private instances.
- Automated Apache web server installation using Launch Templates and user data scripts.
- Applied security best practices using Security Groups to restrict direct access to private instances.
- Monitored application and infrastructure performance using CloudWatch for logging, health checks, and improving system reliability.
- Configured Route Tables to manage traffic flow between public and private subnets efficiently.
- Implemented IAM roles to securely grant EC2 instances access to AWS services without using hardcoded credentials.
- Used Elastic Block Store (EBS) volumes for persistent storage and ensured data durability.
- Designed the architecture following best practices of high availability, scalability, and security.
